

SACT API portal

Improvements to regimen mapping screens & functionality

General Information – My Trust Regimens

My Trust Regimens

General Information

You can now find all your required regimen mapping in one place including rejected regimens.

Anything mapped in My Trust regimens screen will update the matching regimen in the uploaded batch screen.

My Trust regimen screen does not contain NHS numbers. If you need the NHS number to map a regimen then this can be found in the uploaded batch as before.

We have made some improvements to the actual mapping of a regimen but this is essentially the same as before.

You can now make comments & see all comments in a conversation string for each regimen mapping.
Note: NHS numbers are not to be included in the comments.

Fig 1.0 Consolidated drugs now shown here.

As a regimen mapper, you can now see the consolidated drugs that were submitted at the same time as the new local regimen name.

Fig 1.1 Add comment when mapping each regimen

This is intended for you to add any comment about the regimen you are currently mapping. These comments will be seen by the SACT approver pharmacists .

Fig 1.2 You can now search for full regimen / full combination name

You need to include spaces and + signs as shown in the example

Fig 1.3 The list of available regimens are now shown in alphabetical order

Default (Pre-search) list shown in this example
